# Editorial

Welcome to the Volume 10, Issue 2 of our peer-reviewed journal of the *Journal of Architectural/ Planning Research and Studies* (JARS). This issue is mainly devoted to the architectural design and its emerging technologies. Eight papers comprise of one article review about “Agent-based Modeling and Disaster Management” and seven articles which can be categorized into the following groups; architectural design process, building technology and application of technology, landscape architecture, real estate development and urban planning. These articles exemplify the analysis and exploration of the theoretical foundations and applications of architectural design concepts in various scales. They provide invaluable insights into studied problems by offer convincing case studies and experimental analysis. This unique collection represents research findings together with its originality from experiences and practices.

We are also very pleased to present two book reviews which provide an example of an idea about “Ten Types of Innovation: The Discipline of Building Breakthroughs” and “Quantitative Environmental Risk Analysis for Human Health.” We trust that you will find them informative and will stimulate further research into the vibrant area of architecture and related area.

The last but not least, we would like to thank all contributions from the authors and external reviewers of the manuscripts for their continuous support which has significantly helped improved the quality of our journal. And from all of us at JARS, we wish you all a happy and prosperous New Year 2014.
